

Project Analysis and Audit of

Crying Jordan - JORDAN

(Post deploy audit)

The team of this contract is **Critical Roll KYC Gold** verified. That means that the full team of the project went through our identity verification and Due-Diligence program. It also means that the team of Critical Roll will keep an eye on this token, watch out for all unlocking tokens and LP-tokens. We will take away the KYC verification instantly on any sign of malicious activity – **we vouch for this with our reputation!** Always check the contract for holding the **Critical Roll KYC Gold** Token by looking at BSCScan holders or checking via our web3.js based tool on <https://criticalroll.org/#kyc>

Project Information:

Project Name: Crying Jordan

Contract address (BSC – BEP20): [0xa069E54C678635c169b10a7A1343383DBDbc6ecC](#)

Owner address: [0xdc8736533b3679697e9b70c86000e0d8a6d81a94](#)

Marketing address (changeable by owner!): [0x8b1e7e221294d65d705e44a4f6588349b322c160](#)

Symbol: JORDAN

Initial Supply: 1,000,000,000,000,000

40% for public presale

30% into liquidity on PCS

15% Team share, distributed to three wallets, 8% locked for two weeks on launch ¹

10% locked up for 2 month vesting 4 times (unlock Aug. 28th 21

https://dxsale.app/app/v2_9/dxlockview?id=0&add=0xDc8736533B3679697E9b70c86000E0D8a6D81A94&type=tokenlock&chain=BSC) ¹

5% dedicated Michael Jordan wallet locked for 23 (unlock Dec. 6th 21

https://dxsale.app/app/v2_9/dxlockview?id=0&add=0x3A48274F903CD229Cf67CbC27476F7c5Ed72ab22&type=tokenlock&chain=BSC) ¹

8% Transaction Fee:

3% redistribution to all holders

3% converted to BNB for buyback

2% convert to BNB and sent to marketing wallet

Liquidity Pool:

98% (70BNB) of raised presale funds were used for liquidity on Pancake Swap (Exchange)

100% of the LP (Liquidity Pool) Tokens were locked on launch for 1 month (unlock Aug. 12th 21

Potential Security risks

30% of the token supply is not put into liquidity, however they are locked. While the Crying Jordan team was transparent regarding said issue, we cannot guarantee that the team will follow their stated plans accordingly. Since JORDAN is **Critical Roll KYC** verified, we will take a close look on every unlocking of team tokens – **we vouch for this with our reputation!**

The liquidity pool tokens have been locked for 45 days on launch. We consider this a long time since in case of something going wrong, the funds would be unavailable for 45 days. According to Crying Jordan, 45 days were chosen as the result of communication between the team and the community. As soon as the period is over, they will relock all LP tokens or migrate a part to another exchange. Since JORDAN is **Critical Roll KYC** verified, we will take a close look on every unlocking of the LP tokens – **we vouch for this with our reputation!**

The marketing wallet is in full control of JORDAN-team and can be changed whenever they see fit. This is reasonable for various reasons (e.g. to be safe against any kind of hack). Since JORDAN is **Critical Roll KYC** verified, we will take a close look on every change of the marketing wallet – **for this we vouch for with our reputation!**

Ownership of the JORDAN-contract is not renounced. Hence there is a potential risk in the team stopping anybody from trading, but only always both, buy and sell. There are numerous valid explanations for not renouncing ownership – especially when the project aims to be long term. As soon as ownership is renounced, adjustments for exchange-platforms for example, are no longer possible. Yet anyone considering investing in JORDAN needs to be aware **if** and further **what** changes are being made. Transactions fees can also be changed at any time. Since JORDAN is **Critical Roll KYC** verified, we will take a close look every change to the contract itself – **for this we vouch for with our reputation!**

Contract Code Audit

JORDAN is an OLMUSKY-fork, which was also developed by **Critical Roll**, with some adjustments. There are no malicious functions inside the contract. As stated above, however there are functions² that could potentially disable trading.

JORDAN makes use of an autoswap to BNB feature very similar to the one in OLMUSKY. The contract collects a percentage of tokens - 2% for marketing and 3% for the Buyback - from every transaction and stores them on itself. As soon as the tokens reach a certain limit, the contract will swap a specified number of tokens to BNB. The BNB are then split into and to 2/5 are sent to a marketing wallet. The remaining 3/5 are used to buy JORDAN to stabilize the price. Said tokens are then burned or rather sent to a dead-address. – *line 707: function TransferMarketingAndBuyBack (uint256 amount)*

Reassuring to note is *line 955: function setRouterAddress(address newRouter)* which provides the team possibility to migrate to another Uniswap-router if necessary, without the need of a new contract (e.g. PCS V1 -> PCS v2)

There is a known bug to *line 649: function includeInReward(address account)* if called to an previously excluded address it will lead to reflection token loss to potentially all holders. This function should never be called on an already running contract (read more about this bug here <https://perafinance.medium.com/safemoon-is-it-safe-though-a-detailed-explanation-of-frictionless-yield-bug-338710649846>). Confronting the team, they clarified that only accounts that eventually have zero balance would ever be included into rewards which will not expose the issue in this bug.

² E.g. setting any fee to over 50% or setting the maximum transaction amount to 0

Functions to track when called

- *Line 940, function setMaxTxPercent (uint256 maxTxPercent, uint256 maxTxDecimals)*
Can change the maximum transaction amount.
- *Line 924, function setMarketingAddress(address payable _marketingAddress)*
Can set the marketing wallet to any wallet address
- *Line 928, function setTaxFeePercent(uint256 taxFee)*
Can set the redistribution fee to any number
- *Line 932, function setBurnFeePercent(uint256 burnFee)*
Can set the burn fee to any number
- *Line 936, function setBNBFeePercent(uint256 BNBFee)*
Can set the BnB fee (marketing and community fee) to any number
- *line 640: function excludeFromReward(address account)*
Can exclude any wallet from receiving reflection rewards
- *line 649: function includeInReward(address account)*
Can include any previously excluded wallet to receive reflection rewards

Summary

Be a Legend, Join the League!

Crying Jordan is a community and self-declared meme token with the supposed utility to use JORDAN to buy NFTs, and sportswear through their platform. The implementation of the autoswap-feature (Tokens to BNB) inside the contract assures that no big sells of tokens resolve from the marketing fee. Furthermore, the Buyback-feature aims to stabilize the price, to reduce the impact of big sells.
